

## Effects of Acid Rain and Air Pollution

1. Describe the relationship of acid rain and air pollution.
2. Where is sulphur dioxide emitted? What other types of emissions (not shown on the chart) can you think of that pose similar hazards?
3. How is sulphur dioxide in the atmosphere brought back to the ground?
4. What are the three problems caused by acid rain and air pollution?
5. The emission of sulphur dioxide is considered to be one of the most significant global threats since it causes acid rain and is blamed for being a reason for the greenhouse effect. Explain the relevance of the problem: Why do you think it is a “global problem”?
